Education

University of Maryland, College Park

Master of Engineering in Robotics

Aug 2022 - May 2024

GPA: 3.54/4.00

NMIMS University, India

Bachelor of Technology in Mechatronics

Aug 2018 - May 2022

GPA: 3.65/4.00

Experience

Kick Robotics, College Park, MD

Feb 2024 - Present

Computer Vision Engineer Intern

- Developed an autonomous mobile robot for mapping, navigation, and carbon monoxide monitoring in a warehouse using **ROS2**.
- Created ROS2 wrappers for **YOLOv8n** human and forklift detection, optimized inference with **TensorRT**, achieving **3x** faster inference speed than the base model on **Nvidia Jetson Orin Nano**.
- Developed a **ReactJS** web app for remote teleoperation, map visualization, and real-time monitoring, boosting efficiency by **20%**.
- Utilized **EKF** to fuse wheel odometry, and IMU data streams for non-linear state estimation.

Robotics Algorithms & Autonomous Systems Lab, University of Maryland

March 2024 - Aug 2024

Graduate Student Researcher

Advisor: Prof. Pratap Tokekar

- Worked on optimizing 3D reconstruction and object mapping with Next-Best-View (**NBV**) planning by estimating image-based uncertainty to maximize information gain, and using deep learning with **Gaussian splats** to predict full models from partial views.

Lighter than Air Systems Lab, Indian Institute of Technology, Bombay

July 2021 - Aug 2022

Robotics Engineer Intern

Advisor: Prof. Rajkumar Pant

- Designed CAD, manufactured and developed firmware for novel and modular mid-air UAV docking and battery swapping mechanism increasing UAV flight time from **60 minutes** to **30 days**.
- Performed precision landing in ROS gazebo using ARUCO tags and OpenCV to achieve landing accuracy of **+/-40cm**.

Projects

SLIC and Image Segmentation Network [Github](#) | *Python, PyTorch, OpenCV*

- Executed superpixel Simple Linear Iterative Clustering algorithm and used **ResNet18** as backbone to create a superpixel image segmentation network for super pixels achieving **85%** accuracy.

3D Time to Collision using Sensor Fusion [Github](#) | *C++, Eigen, PCL, OpenCV*

- Detected and tracked objects in 3D space from the benchmark KITTI dataset based on camera and lidar measurements.
- Computed time-to-collision on both camera and lidar sensors by projecting 3d lidar points on to camera sensor.

Neural Radiance Fields for View Synthesis (**NeRF**) | *Python, PyTorch, OpenCV*

- Developed a fundamental implementation of Neural Radiance Fields (**NeRF**) to synthesize novel views of intricate 3D scenes using only a sparse set of input views

Auto Pano | *Python, PyTorch, OpenCV*

- Implemented panorama stitching algorithm using traditional (Homography estimation using feature points) and deep learning (HomographyNet: Supervised and unsupervised) methods.

Structure from Motion [Github](#) | *Python, OpenCV*

- Reconstructed a 3D scene from a given set of images by feature correspondence with **RANSAC**-based outlier rejection along with triangulation and nonlinear optimization techniques for robust camera pose estimation.

Camera Calibration [Github](#) | *Python, OpenCV*

- Implemented Zhang's camera calibration methods which resulted in a mean re-projection error close to **0.5** pixels. Used **SVD** for getting an initial estimate of calibration parameters and Maximum Likelihood Estimation(**MLE**) for optimization.

ARIAC Agility Challenge [Github](#) | *Python, C++, MoveIt, ROS2*

- Used MoveIt motion planning and ROS Services to pick and place bin parts using UR5 robot and submitted orders using AGVs.

Semantic Segmentation using SegFormer [Github](#) | *Python, PyTorch, Transformer*

- Implemented the network proposed in [SegFormer paper](#) to predict segmentation masks over 30 classes on Cityscapes dataset.

Robot Path Planning | *Python, Path Planning Algorithms*

- Implemented A*, BFS, DFS, Dijkstra, and RRT for non-holonomic and holonomic robots.

Technical Skills

Languages: Python, C, C++, MATLAB

Software Tools: ROS (Robot Operating System), Blender, GitHub, Docker, CI/CD, Gazebo, Cmake, SolidWorks, Fusion 360, AutoCAD, Unity, MySQL, Carla, Unreal Engine

Libraries: PyTorch, Pandas, Sklearn, NumPy, Matplotlib, OpenCV, open3D

Deep Learning Architectures: VGG16, ResNet, DenseNet, HomographNet, LSTM, NeRF
